

DESCRIPTION

The `<stdbool.h>` header shall define the following macros:

`bool`

Expands to `_Bool`.

`true`

Expands to the integer constant 1.

`false`

Expands to the integer constant 0.

`__bool_true_false_are_defined`

Expands to the integer constant 1.

An application may undefine and then possibly redefine the macros `bool`, `true`, and `false`.

The following sections are informative.

APPLICATION USAGE

None.

RATIONALE

None.

FUTURE DIRECTIONS

The ability to undefine and redefine the macros `bool`, `true`, and `false` is an obsolescent feature and may be withdrawn in a future version.
